WebcamBlocker

WEBCAM SECURITY SYSTEM WITH PARENTAL CONTROL

WebcamBlocker

WebcamBlocker is a real physical shield IMPOSSIBLE for hackers to penetrate!!

WebcamBlocker aims to provide portable devices, smartphones, tablets, netbooks, etc. a safety system that mechanically prevents inadvertent or unauthorized access to the built-in camera within those devices.

The technical solution to this problem is not based on a software application, but a physical device, so that the user is 100% sure of not being viewed by others without consent.

The premise is to have the hidden webcam covered by WebcamBlocker which allows assured parental control or supervisory control on who can use the webcam feature in Electronic devices, whether at home, commerce or industry.

Upon installation of WebcamBlocker make sure it doesn't interfere with the proper closing or latching of the laptop.

Make sure the protective metal is fully open before placing. Align and prevent shading and obstructions.

The **WebcamBlocker** safety cover is manufactured with plastic materials to avoid any cosmetic damage to devices, has an opening, on which the camera must be positioned to protect the device.

The diameter of this opening is large, thereby avoiding being an obstacle in the field of view of the camera lens during use.

To affix **WebcamBlocker** an adhesive is used allowing a firm grip without damaging the surface.

In the interior, there is a metal that is moved to block or unblock the camera by the sliding of a unique magnet within the keys provided.

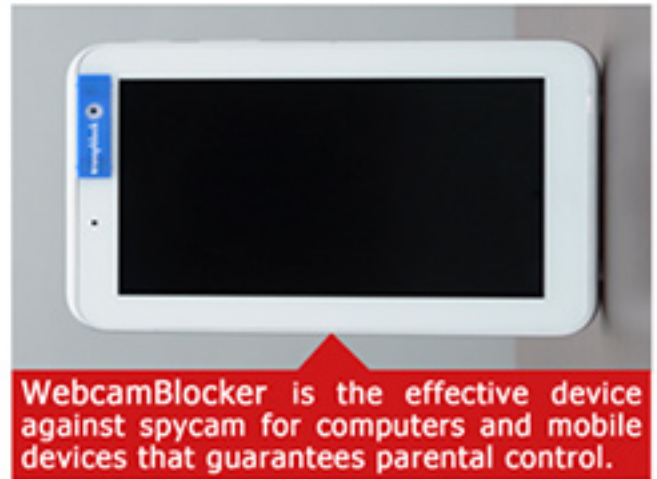

WebcamBlocker

WebcamBlocker is the webcam security you must have in one easy move!!

WebcamBlocker includes a safety cover for devices in smartphones, tablets, laptops which prevents unauthorized viewing or recording video or access to any images inadvertently or maliciously.

The important characteristic of exercising parental control or authorization of use of the webcam is applied by having an external element (magnet) to the safety cover which allows an internal sliding movement of the cover.

The parental -or supervisory- control, block or check, is driven by the magnetic attraction on the slide to the magnetic key used to position the slide at the opening in front of the camera device.

DON'T THINK IT WILL HAPPEN TO YOU?

Consider this: There are websites that list the default passwords of all kinds of devices. If you have something wireless that's hooking up to your household router, it likely came with a pre-set password and login. And there's a good chance, whatever the device, there's a forum online where it's been figured out, hacked, cracked and hijacked for all stripe of nefarious purpose.

Convenient ... for EVERYONE!!

Experts say the best way to protect yourself from this kind of spying is to cover the camera with an aftermarket cover when not in use.

WebcamBlocker : THE ONLY PATENTED

Choose the best option of security and calm for you and yours.
